

# I.N.S.P.I.R.E.

## ABOUT THE PROJECT

*We founded the I. N. S. P. I. R. E. (Inspirational Network for the Sustainable Planet & Inclusive and Renewed Education) Project as a response to the Proposal for a Council Recommendation on Education for Environmental Sustainability. Our planet immediately needs to be healed and secured and the future of humanity and of our planet lies in our hands. It lies also in the hands of today's younger generation. We, the Twinners, are anxious about our planet and prosperity, we believe in the indispensable requirement for sustainable development and we are the volunteers of this action. As teachers, we know the key role of education and training, strongly believe in our students and we are determined to help our world to be more livable. Because we may be the last generation to have a chance of saving the world before it's too late.*

## AIMS

*With this project our aim is to integrate the school related sustainable development goals to our education curriculum and raise awareness and consciousness about this vital issue. We hope our students will learn the sustainable lifestyle habits which are necessary for their future. They will learn how to obtain, evaluate, store, produce, present and exchange information, learn the necessary vocabulary about sustainability and some basic web 2.0 tools, communicate and make presentations in a foreign language, gain social and civic competences and participate in collaborative networks over the Internet. The activities of the project will help them to improve their problem-solving, collaboration, creativity, communication, analytic thinking, ethics, action and accountability skills. This project will also help our students to improve their multilingual, personal, social and learning to learn, citizenship, entrepreneurship, cultural awareness and expression, digital literacy competences.*

## EXPECTED RESULTS

*Throughout and at the end of the project, we aim to produce different collaborative and common products to share with our stakeholders to achieve and disseminate our project and goals. As the theme of the project is across the board, we are planning to share each of its studies with the education world. The students' drama performances, poems and public service ads and other studies will be shared on project social media groups, blog and Twinspace. We set out to make our schools more beautiful, sustainable and inclusive and our students and stakeholders more conscious, determined and aware of sustainable lifestyle habits.*
